Are you sure you are using the best back up software available? Symantec has issued a back up challenge online that asks 5 questions about your back up software. It's a quick and easy way to determine if your back up software is giving you the security and efficiency you need.

From the Symantec web site:

Symantec Backup Exec 11d for Windows Servers is the gold standard in Windows data recovery, providing cost-effective, high-performance, and certified disk-to-disk-to-tape backup and recovery--including continuous data protection for Microsoft Exchange, SQL, file servers, and workstations. High-performance agents and options provide fast, flexible, granular protection and recovery, and scalable management of local and remote server backups.

## House passes more tech-friendly antispyware bill

In their third effort to enact a federal law targeting spyware, members of the U.S. House of Representatives on Tuesday overwhelmingly approved criminal penalties aimed at anyone implanting certain types of malicious software on computers.

The bill, called the Internet Spyware Prevention Act, or I-Spy for short, punishes anyone who intentionally causes software "to be copied onto" a computer--and damages it or steals personal information--with fines and up to five years in prison.

Tuesday's voice vote is a political win for the technology industry and its allies, Reps. Zoe Lofgren, a California Democrat, and Bob Goodlatte, a Virginia Republican, who had supported the I-Spy Act over a competing proposal that would have imposed a complex new set of regulations on software makers.

## People Make the Difference

People drive business success. Human imagination creates the ideas that move business forward. Human conversations and human effort shape those ideas into products and services for the market. The unique ability of people to listen, respond, persuade, and think for themselves enables companies to sell effectively, serve their customers, and work together with their business partners in rich, satisfying ways that create lasting, high-value relationships.

In an era where some see technology as a force that promises to make people subservient to highly structured or automated processes, Microsoft sees a better way to unlock the potential of every person. Systems can only create efficiency: It is people who create value. And the more people can do in their roles, the more value they can create. When Microsoft looks ahead, we see a world where organizations succeed by empowering people to harness information, expertise and the possibilities of complex networks with tools that give them insight, reach and opportunities.
